Welcome to Leetcode Study Group!

Before we begin...

- Session materials: https://github.com/WomenWhoCode/WWCodePython
- Set your chat to "All panelists and attendees" and share your thoughts there
- Ask any questions using the Q&A button
- Have fun and make some coding friends!

WELCOME

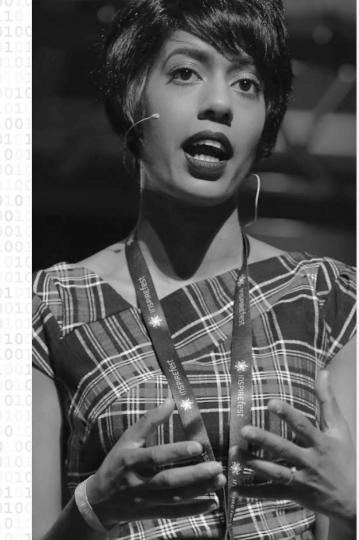

WOMEN WHO

Our Mission

Inspiring women to excel in technology careers.

Our Vision

A world where diverse women are better represented as engineers and tech leaders

Our Values

- + Focus on the mission
- + Live Leadership
- + Punch above your weight
- + Inclusion at the core

Our Target

Engineers with two or more years of experience looking for support and resources to strengthen their influence and levelup in their careers.

290,000

Members

70 networks in 20 countries 122+ countries

14K+ events

\$1025 daily Conference tickets

\$2M Scholarships

Access to jobs + resources

Infinite connections

OUR MOVEMENT

As the world changes, we can be a connecting force that creates a sense of belonging while the world is being asked to isolate.

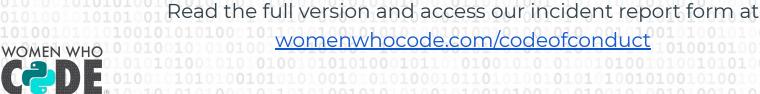

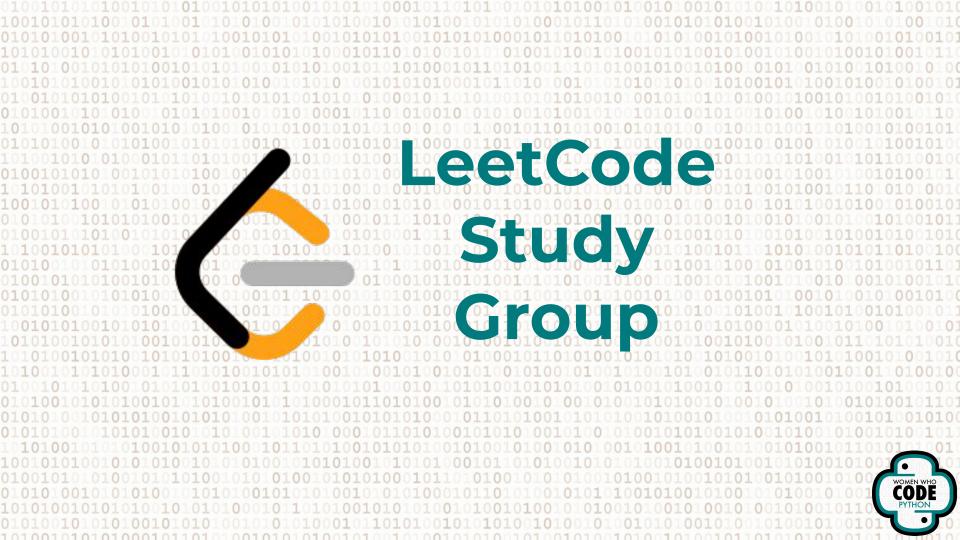

Code of Conduct

WWCode is an inclusive community, dedicated to providing an empowering experience for everyone who participates in or supports our community, regardless of gender, gender identity and expression, sexual orientation, ability, physical appearance, body size, race, ethnicity, age, religion, socioeconomic status, caste, creed, political affiliation, or preferred programming language(s).

Our events are intended to inspire women to excel in technology careers, and anyone who is there for this purpose is welcome. We do not tolerate harassment of members in any form. Our Code of Conduct applies to all WWCode events and online communities.

Meet Your Team! 10101001010010100100101001 010100101010 **Karen**010 Chethana Lead / Associate Software Engineer

- 1. Introduction to two pointers
- Deep dive of 3Sum
 - a. Problem Discussion
 - b. Test cases
 - c. Approaches with time complexity
 - d. Live coding
- 3. Next problems to tackle
- 4. Q&A

What is it and when to use it?

Problem solving technique used on a sorted array/matrix

- When the input is sorted and you need to make comparisons between array elements
- Useful as it reduces number of comparisons (sorted input)
 and time complexity to mostly O(N) where N is the length
 of the input array

How to use it?

Example - 3Sum

"Given an integer array nums, return all the triplets [nums[i], nums[j], nums[k]] such that i != j, i != k, and j != k, and nums[i] + nums[j] + nums[k] == 0.

Notice that the solution set must not contain duplicate triplets"

Simplification of 3Sum

- Output is a list of triplets where triplet sums to 0

Next steps from here

Two sum - very popular and exposes you to newer patterns

"Given an array of integers nums and an integer target, return indices of the two numbers such that they add up to target"

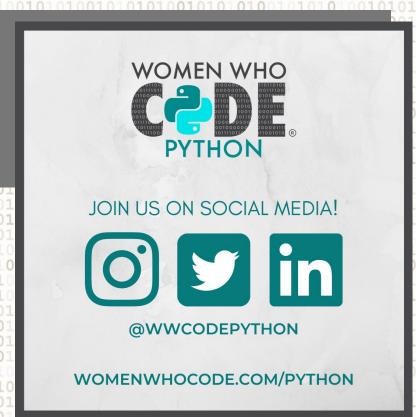

Two sum II - similar to the above, notice that the input is sorted

"Given a 1-indexed array of integers numbers that is already sorted in non-decreasing order, find two numbers such that they add up to a specific target number. Let these two numbers be numbers[index1] and numbers[index2] where 1 <= first < second <= numbers.length"
